

Zhiyi ZHAO

isyzhz@gmail.com | www.zhiyizhao.xyz | +86 157-3605-8772

EDUCATION

South China University of Technology

B.Eng. in Electrical Engineering

Selected courses: Electric Circuits, Power System Analysis, Power Electronics, Analog Electronics, Digital Electronics, Automatic Control Theory | **GPA:** 3.85 / 4.0 or 90.11 / 100

Online courses: [Optimization in modern power systems](#) given by Prof. Spyros Chatzivasileiadis

- Gained preliminary knowledge in linear programming and quadratic programming
- Learned how to formulate economic dispatch problem and DC optimal power flow (DC-OPF) problem
- Got a preliminary understanding of AC-OPF problem and its non-convex nature

RESEARCH EXPERIENCE

Auxiliary Frequency Control using LCC-HVDC

Dec. 2022 – Mar. 2022

Supervisor: Prof. Ying Xue

- Replaced the AC transmission lines with LCC-HVDC for the four-machine two-area model in PSCAD
- Verified the decoupling effect of LCC-HVDC on the frequency of the two areas through simulation. Gained preliminary insights into the auxiliary frequency control capability of LCC-HVDC through simulation

Photovoltaic Hosting Capacity Estimation in Radial Distribution Networks [\[Slides\]](#)

Jul. 2022 – Nov. 2022

Supervisor: Prof. Ying Xue

- Proposed a simple yet effective approach to estimate photovoltaic hosting capacity in radial distribution networks using bus voltage and line parameters
- Found that there exists a strong linear relationship between the square of bus voltage and PV output. Found that the increment of line losses mainly happens on the branches from the substation to PV-connected bus

PROJECTS

Multi-level Energy Exploitation Based on Hydrogen Storage [\[Slides\]](#)

May. 2022 – Jul. 2022

Supervisors: Prof. Jiehui Zheng and Prof. Zhigang Li

- Applied the waste heat generated from electrolysis and fuel cell discharge to seawater desalination or integrated it into the heat network
- Synthesized industrial raw materials such as methanol by combining the hydrogen from the storage system with the captured carbon dioxide from thermal power plants

IoT-based Off-grid Solar Panel Monitoring System [\[PDF\]](#)

Apr. 2022

Supervisor: Prof. Mengshi Li

- Designed an off-grid solar panel monitoring system integrated on a phone-sized PCB, providing users with real-time data
- Utilized the wide coverage and low power consumption features of NB-IoT to cater to applications in remote and isolated areas

PUBLICATIONS

- **Zhiyi Zhao**, Ying Xue, Zhaoxi Liu, Weiye Zheng, Shunyin Duan, Lei Yu, “A Novel Estimation Method for Maximum PV Hosting Capacity in Radial Distribution Networks using Bus Voltage and Electrical Distance,” *Electric Power Systems Research*, **Accepted**.

ACTIVITIES

Summer in Japan 2021, Kyushu University

Jul. 2021

- Received a scholarship equivalent to the tuition fee, which is only awarded to “applicants whose academic records are evaluated as particularly strong by the SIJ selection committee”
- Achieved S (90-100) grades in the chosen courses *Interdisciplinary Lecture Series (ILS)* and *Japanese Language Course (JLC)*
[The program reflection](#) was posted on the program’s official website

AWARDS

- **National Scholarship** (Top 0.2% national-wide) Dec. 2022
- First Prize in the 1st [Electrical & Electronics Engineering Innovation Competition](#) (Southern Division) Jul. 2023

SKILLS

- **Language:** IELTS: 7 (7.5 / 7.5 / 6 / 6.5)
- **Programming:** C++, Python
- **Tools:** Matlab/Simulink, PSCAD, T_EX, Visio, Origin
